# Rare Animals of Louisiana

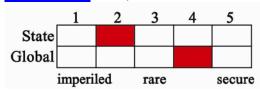

## **Reddish Egret**

Egretta rufescens

Rarity Rank: S2B,S2N/G4

### Identification:

- Medium sized heron with two different color phases: one is dark, red-brown to rust colored on the head and neck with slate gray body and another is all white and very uncommon in Louisiana
- Stout bill with pink base and black tip
- Dark bluish to gray legs
- Adult length is between 69 and 82 cm with a wingspread of about 1.2 m
- Solitary during non-breeding season

- Nests in mixed species colonies amidst shrubby vegetation
- Generally restricted to sandy beaches or shallow ponds near the coast or on barrier islands when feeding

Mainly small fish

#### Range:

- Nests locally from the Northern Gulf Coast south through the Caribbean and both coasts of Mexico, including the Yucatan Peninsula
- Winters throughout the breeding range
- In Louisiana, the species is found throughout the coast during migration and less commonly in winter
- During nesting season it is restricted to islands in southeastern Louisiana

### Reproduction:

- One brood per season, clutch size usually three or four
- Nests are built using grasses, sticks and forbs in a tree, vegetation or on the ground, and are rarely close together
- Eggs are ovate to elliptical in shape, bluish green in color and have a smooth texture
- Incubation accomplished by female
- Fledglings leave the nest after nearly five weeks and are able to fly as early at six and a half weeks

U.S. Fish and Wildlife Service

Range based on occurrences in Natural Heritage database

# Rare Animals of Louisiana

#### Threats:

- Entanglement in fishing nets and lines
- Beach development (especially in Florida) decreases the quantity of suitable habitat
- Human disturbance may lead to nest abandonment
- Coastal land loss

### Beneficial Management Practices:

Roping or fencing off nesting sites during breeding seasons

### LA River Basins:

Pontchartrain, Mississippi, Barataria, Terrebonne
